## SAFETY INSTRUCTIONS

### [ SAFETY PRECAUTIONS ]

**WARNING:** The chassis of this projector is isolated (COLD) from AC line by using the converter transformer. Primary side of the converter transformer and lamp power supply unit circuit is connected to the AC line and it is hot, which hot circuit is identified with the line in the schematic diagram. For continued product safety and protection of personnel injury, servicing should be made with qualified personnel.

The following precautions must be observed:

1. An isolation transformer should be connected in the power line between the projector and the AC line before any service is performed on the projector.
2. Comply with all caution and safety - related notes provided on the cabinet back, cabinet bottom, inside the cabinet or on the chassis.
3. When replacing a chassis in the cabinet, always be certain that all the protective devices are installed properly, such as control knobs, adjustment covers or shields and barriers.

**DO NOT OPERATE THIS PROJECTOR WITHOUT THE PROTECTIVE SHIELD IN POSITION AND PROPERLY SECURED.**

4. Before replacing the cabinet cover, thoroughly inspect the inside of the cabinet to see that no stray parts or tools have been left inside.

Before returning any projector to the customer, the service personnel must perform the following safety checks and be sure that it is completely safe to operate without danger of electrical shock.

### [ PRODUCT SAFETY NOTICE ]

Product safety should be considered when a component replacement is made in any area of the projector. Components indicated by a mark (  $\Delta$  ) in the parts list and the schematic diagram designate components in which safety can be of special significance. It is, therefore, particularly recommended that the replacement of these parts must be made by exactly the same parts.

### [ SERVICE PERSONNEL ---- WARNING ]

**Eye damage may result from directly viewing the light produced by the Lamp used in this equipment.**

**Always turn off Lamp before opening cover. ultraviolet radiation eye protection required during this servicing.**

**Never turn the power on without the lamp to avoid electric - shock or damage of the devices since the stabilizer generates high voltages(  $\approx$  25kV) at its start.**

**Since the lamp is very high temperature during units operation. Replacement of the lamp should be done at least one hour after the power has been turned off, to allow the lamp cool - off.**

### [ DO NOT ATTEMPT TO SERVICING THE REMOTE CONTROL UNIT. ]

Laser Beam may be leaked out when in disassemble the Unit.

As the Laser Beam used in this Remote control unit is harmful to the eyes.

## Circuit Protections

This projector is equipped with the following circuit protections to operate in safety. If the abnormality occurs inside the projector, it will automatically turn off by operating one of the following protection circuits.

### Fuse

The fuse is located inside the projector. When the Mains switch on the rear panel is turned on and the lamp indicator does not illuminate, fuse may be open. Remove the cabinet and check the fuse.

It should be used the specified fuse as follows;

Fuse Part NO : 423 021 7801  
TYPE T6 3AH 250V FUSE  
LITTLE FUSE INC. TYPE 21506.3

#### How to replace the fuse

1. Disassemble the cabinet and main unit.  
(Refer to Mechanical disassemblies.)
  2. To remove the fuse holder, press and turn left the fuse holder by using slot screwdriver.
- To install the fuse, take reversed step in the above.

### Thermal switch

If temperatures around the lamp reaches to 100 °C, the thermal switch(SW905) will be activated and shut off mains power supply.

Check the resistance between terminals of thermal switch by using the tester. If it has high impedance, thermal switch may be in operative.

To return to normal operation, press the reset button on the thermal switch inside the projector as following procedure.

#### How to reset the thermal switch

1. Disassemble the cabinet.  
(Refer to Mechanical disassemblies.)
2. Press the reset button on thermal switch.

## MAINTENANCE

### CLEANING METHODS

After long periods of use, dust and other particles will accumulate on the LCD panel, prism, mirror, polarized glass, lens, etc., causing the picture to darken or color to blur. If this occurs, clean the inside of optical unit.

Remove dust and other particles using air spray. If dirt cannot be removed by air spray, disassemble and clean the optical unit.

#### Cleaning with air spray

Clean up the LCD panel and polarizing plate by using the air spray from the cabinet top opening.

##### **Caution:**

Use a commercial (inert gas) air spray designed for cleaning camera and computer equipment. Use a resin-based nozzle only. Be very careful not to damage optical parts with the nozzle tip. Never use any kind of cleanser on the unit. Also, never use abrasive materials on the unit as this may cause irreparable damage.

#### Disassembly Cleaning

Disassembly cleaning method should only be performed when the unit is considerably dirty and cannot be sufficiently cleaned by air spraying alone.

**Be sure to readjust the optical system after performing disassembly cleaning.**

1. Remove the cabinet top and main unit.
2. Remove integrator lens unit and relay lens unit, and then the optical base top following step 2 of "Optical Unit Disassemblies". If the LCD panel needs cleaning, remove the LCD panel unit following to "LCD panel replacement".
3. Clean the optical parts with a soft cloth. Clean extremely dirty areas using a cloth moistened with alcohol.

##### **Caution:**

The surface of the optical components consists of multiple dielectric layers with varying degrees of refraction. Never use organic solvents (thinner, etc.) or any kind of cleanser on these components.

Since the LCD panel is equipped with an electronic circuit, never use any liquids (water, etc.) to clean the unit. Use of liquid may cause the unit to malfunction.

## MAINTENANCE

### AIR FILTER CARE AND CLEANING

The removable air filter prevents dust from accumulating on the surface of the projection lens and projection mirror. Should the air filter become clogged with dust particles, it will reduce the cooling fan's effectiveness and may result in internal heat build up and reduce the life of the projector.

To clean the air filter, follow the cleaning procedures below:

1. Turn the POWER ON/OFF button OFF.
2. Remove the air filter cover.
3. Remove the air filter from the filter cover.
4. Clean the air filter with a vacuum cleaner.
5. Replace the air filter. Make sure that air filter cover is fully inserted.

Do not clean with water. Doing so may damage the air filter.  
Do not operate the projector with air filter removed.

### RECOMMENDATION

**TO ENJOY PICTURE IMAGE, USE THE PROJECTOR IN THE CLEAN ENVIRONMENT. USAGE IN THE CLEAN ENVIRONMENT IS RECOMMENDED.**

When used under the dusty or smoky conditions, dust may accumulate on the liquid crystal panel and lens inside it, and may resultantly be projected on the screen together with the picture.

When the above symptoms are noticed contact the place where your authorized dealer or service station for the cleaning.

## CLEANING THE PROJECTION LENS

Follow these steps to clean the projection lens:

1. Apply a non-abrasive camera lens cleaner to a soft, dry cleaning cloth.  
Avoid using an excessive amount of cleaner.  
Abrasive cleaners, solvents or other harsh chemicals might scratch the lens.
2. Lightly wipe the cleaning cloth over the lens.
3. If you don't intend to use the projector immediately, replace the lens cover.

## [NOTES ON SCHEMATIC DIAGRAM]

### 1. PRODUCT SAFETY NOTICE

THE COMPONENTS DESIGNATED BY A MARK (  $\triangle$  ) IN THIS SCHEMATIC DIAGRAM DESIGNATE COMPONENTS WHOSE VALUES ARE OF SPECIAL SIGNIFICANCE TO PRODUCT SAFETY. SHOULD ANY COMPONENT DESIGNATED BY A MARK NEED TO BE REPLACED, USE ONLY THE PART DESIGNATED IN THE PARTS LIST. DO NOT DEVIATE FROM THE RESISTANCE, WATTAGE AND VOLTAGE RATINGS SHOWN.

### 2. NOTES ON SCHEMATIC DIAGRAM

Specification of capacitor and resistors will be shown with coded symbols, reading code symbols following the chart and notes. Some capacitor and resistors will be shown directly with values and no other information. Detailed information on each capacitor and resistor will be shown in the list.

NOTE: DO NOT REPLACE OR ORDER RESISTOR AND CAPACITOR PARTS FOLLOWING THE SPECIFICATIONS SHOWN IN THE SCHEMATIC DIAGRAMS.

ALWAYS CHECK FOR THE CORRECT SPECIFICATIONS IN THE PARTS LIST. ESPECIALLY FOR CRITICAL COMPONENT MARKED  $\triangle$ . SPECIAL ATTENTION MUST BE GIVEN TO CRITICAL COMPONENTS.

### 3. READING IN SCHEMATIC DIAGRAM

Read resistor codes as follows:

1. All resistance values are indicated in ohms: K=1,000. M=1,000,000.
2. Resistor which is indicated with resistance value only are 1/6W carbon resistor.  
Resistor which is indicated with material tolerance and value are 1/4W rated wattage.

Read capacitor codes as follows:

1. For capacitors identified with  $\text{---}||\text{---}$ , values less than 1 are expressed in  $\mu\text{F}$ , values more than 1 are in pF.
2. For capacitors (electrolytic) identified with  $\text{---}||\text{---}$ , values are expressed in  $\mu\text{F}$ .

Voltage and waveforms were taken using a video color bar signal (1V p-p at 75 ohms terminated) and controls to normal.

Voltages were taken with a high-impedance voltmeter.

### 4. SERVICE NOTES;

1. When replacing high wattage resistors on circuit board, keep the resistor body 10 mm (3/8") from circuit board.
2. Keep wires away from high voltage and high temperature components.
